Vim in a nutshell

Vim learning curve

climbing up

sliding down
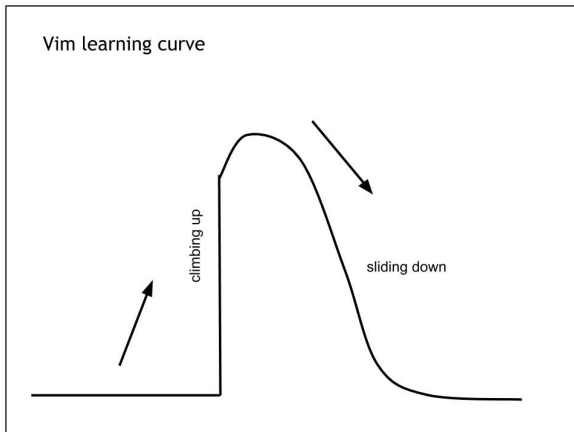

github.com/srydell/tmux-intro

Overview - Mostly demos

1. What about the command line?

2. :*make* steals the show

3. Dispatch the saviour

---

github.com/srydell/tmux-intro

What about the command line?

There is no replacing the command line
- Use it from vim

github.com/srydell/tmux-intro

How though?

- :!python3 ⟨C-R⟩%⟨CR⟩

- vimux

---

github.com/srydell/tmux-intro

:*make* steals the show

:*make* **steals the show**

- The native way to build and run scripts from within vim
- errorformat
- quickfix list
- :compiler

---

github.com/srydell/tmux-intro

Dispatch the saviour

Dispatch the saviour - tpope

- vim-dispatch
  - Asynchronous :*make* with :*Make*
  - Sending build processes to other windows (e.g. tmux panes)
- vim-projectionist
  - Stores metadata about your project
  - Glob specific *makeprg*

---

github.com/srydell/tmux-intro

Questions?

:set makeprg=echo\ Questions\?

:make
